

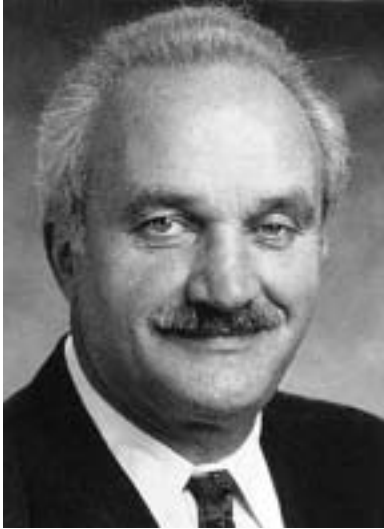

charting a new course

**Mechanical
Contracting
Foundation**

2001 Annual Report

Dear Industry Leader

Charting a new course? What does that mean? For the Mechanical Contracting Foundation it means refocusing on the mission and mandate we have from the members of our industry. It means revitalizing and reconnecting with the things, and more importantly, with the people who have made the Foundation the force for positive change that it is.

A new course refers to the new emphasis your Foundation will place on developing the educational programs and products our industry truly needs. It refers to developing the relationships, the organization, and the processes needed to accurately determine what our industry's educational needs are before we solicit and underwrite programs. You will see the differences. If not in our organization and style, then in the real-world programs and services the Foundation's financial underwriting will produce.

We will chart this new course in conjunction with a revitalized Partnership Enterprise, that group of contributors who have each given \$100,000 or more to the Foundation. The critical role to be played by the Enterprise will be that of finding, soliciting, and evaluating industry-related research and programs for possible funding. They will be the "early warning" system of the industry, helping the Foundation detect and then act proactively to solve the most pressing issues facing our industry. They will also help us shepherd funded projects through to completion and implementation.

Do you have to be in the Partnership Enterprise or be a big contributor to the Foundation to have a voice or play a role? Absolutely not. You just have to have a passion for providing educational programs and services for your fellow MCAA and MSCA members. The needs and opportunities to be of service through the Foundation are many. If you don't know what to do or how to serve, but you would like to, then contact me or the Foundation staff in Rockville, Maryland.

Charting a new course is not risk-free, but in these challenging times, neither is staying the previous course. We hope you will join us and support our efforts as we embark on this bold new approach.

Sincerely,

A handwritten signature in cursive script that reads "W.A. Bianco".

William A. Bianco, Jr.
President
Mechanical Contracting Foundation

For the past two years, the financial environment confronting the Mechanical Contracting Foundation endowment can best be described as a “challenge.” The MCF Board of Trustees has accepted this challenge, determined to control risk factors by:

- working more effectively with our contributors and our investment manager;
- having the discipline to set and follow clear investment and spending policies;
- improving the working organization of the Foundation; and,
- utilizing more effectively the significant resources we already have.

The 2001 investment climate was volatile, yet the Foundation’s endowment withstood the year’s negative market trends. At year-end, the MCF endowment showed a modest gain and a closing balance of \$6,268,252. While some of the gain can be attributed to a stronger year-end stock market, credit must also be given to the investment and spending decisions made by the Foundation’s Board of Trustees. The members did, indeed, control those factors within their power to do so.

We are optimistic about our revitalization of MCF’s Partnership Enterprise and what this will ultimately mean for the endowment and for our industry. We see this reinvigorated relationship with the Partnership members as the opportunity to leverage all the resources our contributors give so generously: finances, time and enthusiasm, invaluable industry experience, and access to their significant intelligence.

So, do you have to be a member of the Partnership Enterprise to have a voice or play a role in your new Foundation? No, but we hope you will share our passion for providing world-class educational programs and services for our industry. To make an investment in the Foundation, financial or otherwise, I encourage you to contact one of the Foundation’s Trustees or give me a call here at the Foundation’s office.

We are charting a new course for the Mechanical Contracting Foundation...and it’s a journey we should all take together!

Sincerely,

A handwritten signature in black ink that reads "Dennis Langley". The signature is written in a cursive, flowing style.

Dennis Langley

Products and Services

The Mechanical Contracting Foundation provided financial support for a number products and research studies in 2001. The projects and products described below are demonstrative of the kinds of hands-on, bottom line-oriented programs and research the Foundation will increasingly undertake through its revitalized relationship with the Partnership Enterprise.

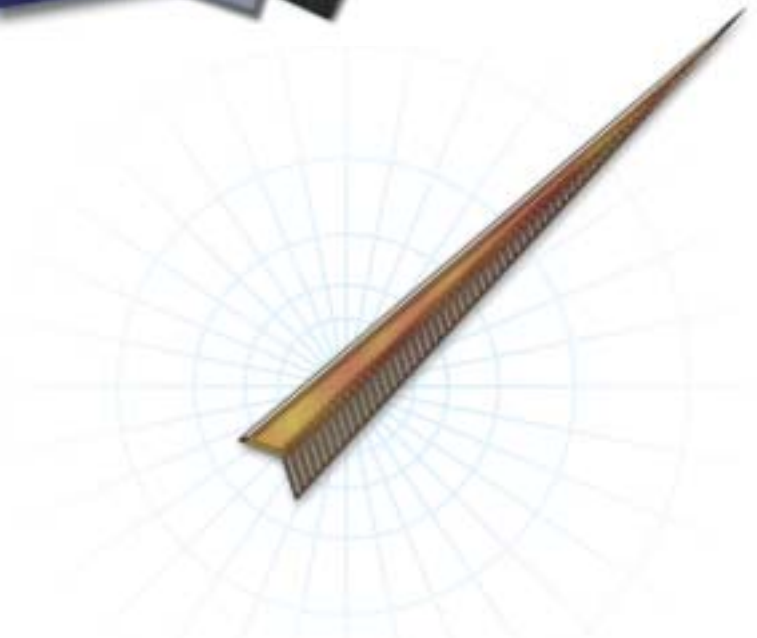

Change Order Impact Study and Software Tool

Quantifying the Cumulative Impact of Change Orders for Electrical and Mechanical Contractors is the most significant study ever undertaken into the impact of change orders on mechanical construction projects. Jointly produced by the Mechanical Contracting Foundation (MCF), the Electrical Contracting Foundation, and the Construction Industry Institute (CII), the study shows strong correlation between the number of change items on a project and labor productivity loss. The report provides both process improvements and specific recommendations to reduce or eliminate change orders. In addition, it provides two mathematical models to determine the existence of impact and the financial scope, if impacted. The MCF (with in-kind support from ANVIL International) funded the development of a software tool, called *The Change Order Impact Calculator*, to accompany and facilitate the use of the research report. All MCAA contractor and plumbing members get a free copy of the report and software.

Underwritten by MCF in 2001

Safety Excellence Initiative Projects—2001

- Model Fall Protection Program—(June 2001)
- Toolbox Safety Talks (Volume II)—(July 2001)
- Bloodborne Pathogens Safety Training Kit—(August 2001)
- Confined Space Entry Safety Training Kit—(September 2001)
- Aerial and Scissors Lifts Safety Training Kit—(October 2001)
- Crane Signal Poster—(November 2001)
- Hazard Communication Poster—(December 2001)
